

New Engineering Design Process Resource

How to Invent or Design...Anything!

Not all projects use the scientific method.

The [scientific method](#) is one of the most powerful techniques of the past millennium, but if you want to invent or design a **solution to a problem**, then the scientific method is most definitely the *wrong* tool for the job. Inventors, engineers, and designers instead use a complementary method, **the engineering design process**.

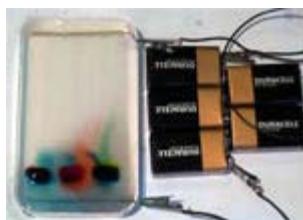

Our new [Engineering Design Process Guide](#) provides a blueprint for students working on engineering projects. Instead of starting with a question, **the engineering design process begins with a human problem or need**. Then the process systematically guides you in figuring out how to create an optimum solution in the real world.

To help students and teachers understand which method is most appropriate for a project, we've put together ["Comparing the Engineering Design Process and the Scientific Method."](#) a side-by-side comparison of the two methods.

3-2-1, Science 'Action'

The [Summer Science Fellows](#) got behind the camera--and in front of it--this summer when they collaborated on making videos of two Science Buddies Project Ideas. Designed to highlight the "fun" of doing a science project, these [YouTube videos](#) put two popular science projects in action and might help inspire your students!

Register Now!

[Register](#) to join us for our free webinar for educators, Sept. 14 (3:30-4:30 p.m. PDT)!

This year's [webinar](#) will include our new video and computer game design resources, developed with support from the AMD Foundation.

New Video Gaming Resources!

Video Games for Science Projects?

Absolutely! Our new video and computer game design resources help you encourage and support student gaming projects.

No Bones Required!

We just released an updated set of video and computer game design resources, sponsored by **AMD Changing the Game**, an initiative of the AMD Foundation, which is designed to spark students' interest in science, technology, engineering and math by creating video games. Our "gaming" resources help teachers and parents pinpoint the academic goals behind gaming projects and guide students toward successful, exciting, and educational video and computer game design exploration.

Do Something New!

The following Project Ideas were recently added to the Science Buddies [directory of more than 1000 science projects](#):

- [Go Fish! Creating an Ocean-Friendly Fishing Video Game](#)
- [Under Pressure: Does a Child's Blood Pressure Depend on His or Her Age?](#)
- [When Your Sniffer Snoozes, You've Got Olfactory Fatigue](#)
- [Want to Warm Up or Cool Down? Go Underground!](#)

Student Successes

- [Lara Fulton](#) investigated the microbes that grow on a water bottle.
- [McCray McGee](#) tested the effectiveness of fish as a fertilizer on the family farm.
- [Mikaela Kay](#) turned an interest in the floral industry into a multi-year study of floral preservatives.
- Read more [Science Buddies in Action](#) stories.
- We would [love to hear](#) about your
